

Specialists in cloud technology and transformation

A brief introduction – September, 2019

What we do

Our customers realise more value and benefit from cloud, spend less and operate at lower risk.

We leverage our knowledge, expertise and real-world experience to help our customers optimise their use of cloud technology and successfully embed new “cloudy” ways of working to maximise ROI, manage risk and lower TCO.

We provide the right mix of consulting and hands-on delivery at every stage of our customers’ journey, optimising performance and agility, and reducing risk and costs.

What makes us unique

We deliver tangible, demonstrable ROI, outcomes (or outputs) directly aligned to your value-dimensions

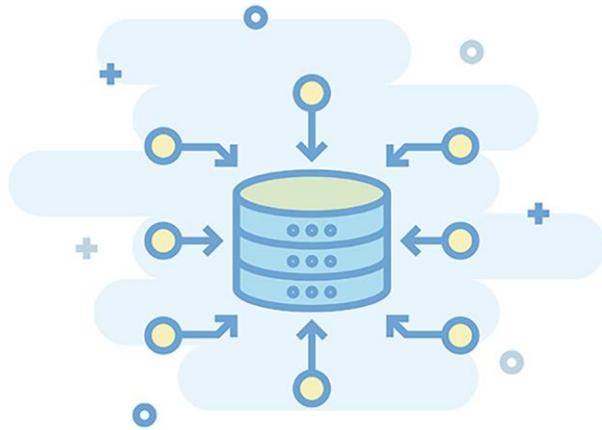

We accelerate benefits realisation, delivering value fast, balancing impact to BAU

We leave a legacy, enabling your teams, not “owning” the solution, supporting your future success

Our core competencies

Cloud Data & Analytics

Improving business decisions through advanced analytics

Design and implement cloud data and analytics solutions, rearchitect and optimise your data services.

[Discover more ->](#)

Cloud DevOps & Automation

Improving velocity, efficiency and confidence

Design and implement CI/CD and Infrastructure as Code pipelines, and optimise appdev, infra and operations.

[Discover more ->](#)

Cloud Network & Platform

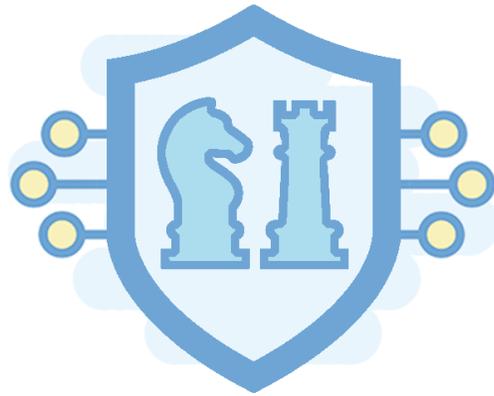

Optimise scale & performance, reduce risk and costs

Design and implement secure cloud solutions, optimise and migrate your technology estate.
